

Norlys manufactures high quality exterior lighting for the professional and discerning lighting business with our products typically sold through Electrical Wholesalers and quality retailers in more than 20 countries.

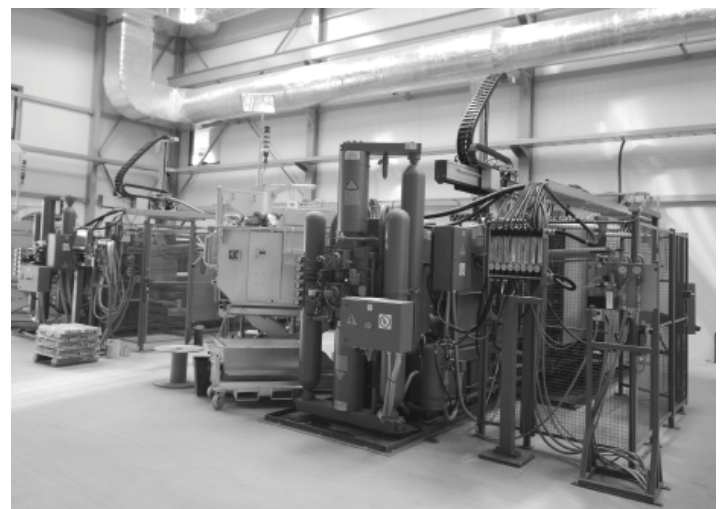

Norlys is a Scandinavian company with a 50 years history in the professional lighting business and it continues to ensure that all products are designed and produced in typical robust Scandinavian fashion; quality, detail, function and design are at the heart of every Norlys fitting, well able to withstand tough climatic conditions.

Our own 12000m square production facilities, based in Europe, allow us total control of the whole manufacturing process from conception to the finished article. Our constant aim is to produce lighting fixtures of outstanding quality and design. This is confirmed by the ISO 9001 accreditation and certification of our factory.

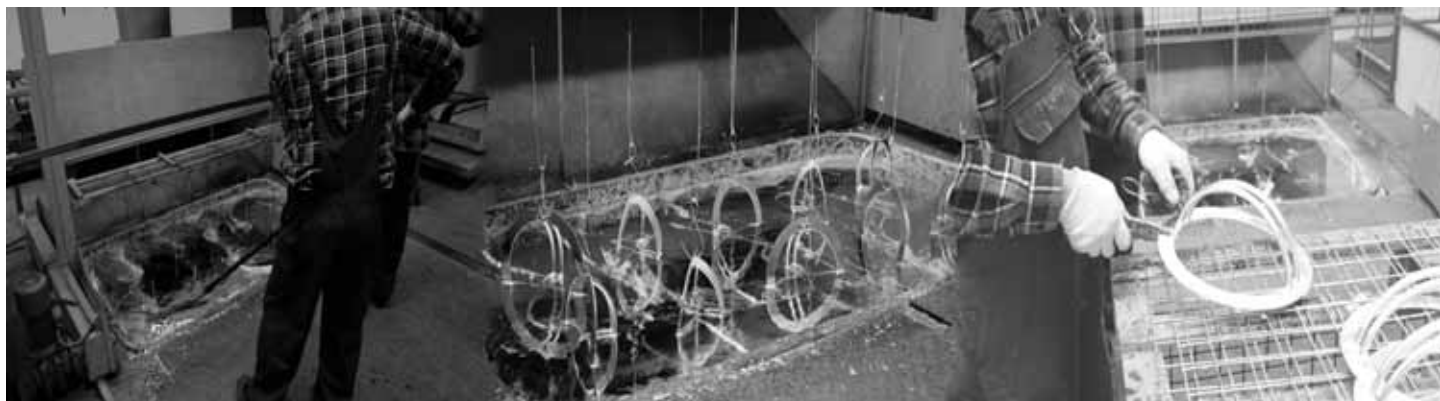

Our large range of galvanised steel fittings offers a totally new approach to decorative exterior lighting. The use of zinc alloy, prior to galvanisation, gives the product a finish that is more durable than steel, thus protecting the product from all kinds of damage, scratches and knocks. This, in turn, gives the product a very high level of protection against corrosion.

Our production process varies from the handmade CHELSEA range (page. 88) to highly automated production through use of CNC machines.

The multistage surface treatment, used prior to powder coating on certain models, ensures excellent resistance against corrosion. Continuously inspected for correct temperature and chemical consistency by our in-house chemist, the painting and treatment system is one of the most advanced used in lighting manufacturing in Europe. All these technical features result in the following key points.

- Multistage pre-painting-treatment on all aluminium components including chromate dipping prior to powder coating.
- Multistage pre-treatment for all painted steel items.
- Corrosion warranty on all aluminium parts.
- Anti corrosion warranty on galvanised and painted steel fittings.
- Copper fittings are supplied in a raw finish to allow natural patina over time.
- Low energy option on most fittings.
- Choice of different colour options per range, including several hand patina options after request.

SCANDINAVIAN WOOD

Our new range of wooden bollards fits perfectly to all projects combining modern lighting in harmony with natural materials.
 We use a selection of first class Scandinavian pine wood, impregnated for protection.
 Easy maintenance: painted twice during production, refresh the surface with oil paint.
Special marked with *:
 Impregnated only: without painting on request to allow customized colours.
