DELTA

# New DELTA iris Program

A multitude of designs combined with emergency light  
and alarm functions

Answers for infrastructure.

DELTA iris switches and outlets are excellent for use in offices, hotels, rental apartments, public buildings and movie theaters.

## DELTA iris – Designed to Perfection

### Highlights

- New design with curved, rectangular shape
- Greatest safety by new functions as emergency light and alarm function
- Additional application as weather-resistant, scratch resistant and antistatic
- Low environmental impact by use of organic materials

### New Program

The DELTA program of switches and outlets is growing. Our new DELTA iris line for large areas stands out for its timeless design, customary reliability and high safety standards.

For years now, DELTA switches and outlets have been known for their high functionality, attractive design and excellent workmanship.

### Robust modular system

The frames and rocker switches in the new DELTA iris line of switches are available in four colors and their modular design makes them flexible and easy to combine. The Duroplast frames are weatherproof, scratch resistant, easy to clean, antistatic and come in both vertical and horizontal designs.

### Attractive and safe

In addition, we have integrated new functions, such as an emergency light signal that switches on automatically in the event of a power outage. Integrated gas and water leakage detectors set off an alarm, for instance if there is water damage, and warn of dangers.

All of this makes DELTA iris switches for large areas suitable for use in offices, hotels, rental apartments, public buildings and movie theaters, basically everywhere where the greatest possible safety and timeless design are important.

The DELTA iris line elements are available in mercury aluminum, neptune steel, odyssey gold and white. They expand the color palette of the previous DELTA range and ideally complement individual interior designs.

## New functions

Gas detector

Motion detector

Emergency light

Removable  
emergency light torch

### Easy to use

Frame options include curved, rectangular shapes, and the modular design of the Siemens switches makes conversions and upgrades within the program especially convenient. The rocker switches simply snap in. Other frames, light sources or power indicators can be installed at any time, even during operation, without having to remove the unit insert.

The conductor cables are easy to install by inserting them into the funnel-shaped openings provided and just as easy to remove by activating the release lever. Live components are well insulated for protection against electric shock.

All components are made from high quality, environmentally friendly materials and offer a long service life of more than 100,000 operating cycles.
