For every space, **every** **solution**

Whether for a new building or renovation of an existing space, customers want lighting solutions that provide quality of light and substantial energy and maintenance savings. The new CoreLine range of LED luminaires offers stylish, energy-saving, affordable, and easy-to-install lighting solutions – viable replacements for traditional lighting technologies across numerous applications.

Using LED lighting technology across the range allows longer lifetimes, which means reduced maintenance and fewer replacement parts, plus energy savings of up to 75% compared with traditional lighting fixtures – all leading to more sustainable lighting solutions.

Tailor made

Riemer Adema
Product Manager
at Philips Lighting
“Installers have given us valuable insights on design trade-offs and installation.”

What makes the CoreLine range special?
“CoreLine products are developed with the installer’s perspective in mind. What makes CoreLine special is that we have created a

range of products that help clients move to a new technology without compromising anything. They get an amazing quality of light with all the added benefits of LED - energy savings and long lifetime.”

How was the range developed?
“For all CoreLine products, as they were being designed, samples were shown to installers. We wanted to validate the concept and get feedback from them at an early stage. That helped us get the functional specifications right and create products that were easy to install.”

“
CoreLine products
are developed with
the installer’s
perspective in mind.”

We used architecture studies to see how to fit in the LED board and driver. Next, the design and R&D teams stepped in, and finally the products were manufactured and tested. The marketing and sales teams then prepared the product introduction, and the range went on sale.”

How did you incorporate installer feedback?

“Let me give you an example. CoreLine Wall-mounted was co-developed with a partner installer, right from the initial drawing stage up until the product launch. The installer gave us valuable insights on design trade-offs and installation specifics. It’s all in the details. Things like two-hand installation, a good fit for different power cable diameters, etc. It’s those little things that make a really big difference.”

How has the market responded to CoreLine?

“We are hearing great things from our installers, and they are getting good feedback from their clients. The range is sold everywhere in Europe - but also in Russia, Turkey and the Middle East, and even in New Zealand and Australia. We’ve also seen great response from our wholesale partners, who have embraced CoreLine because it offers such a complete solution.”

What are the latest developments?

“I think the biggest change has been adding lighting controls. Installers tell us that their clients are really interested in this, and rightly so. Controls can increase the energy savings by up to 80%, and they also enhance the level of comfort and well-being. To make things simpler for installers, we added our own matching controls for each CoreLine product. Now we can guarantee compatibility, so that the combination of luminaire and control always works.”

The quality and light levels delivered by the CoreLine range enable 'hole-for-hole' replacement of similar traditional lighting fixtures. Simply remove the old fixture and fit the new innovative LED CoreLine solution; virtually no need for expensive rewiring or new ceiling configurations.

Want increased lighting comfort & additional energy savings?

By simply adding lighting controls with CoreLine luminaires – significant additional savings can be made on costs associated with energy and carbon; reducing the payback time of the installation.

Lighting need only be on where and when needed. Movement and presence detection controls can help you to simply achieve this – reducing costs, whilst still ensuring comfort and safety. CoreLine dedicated controls; the clear choice for many applications.

The look and feel of CoreLine solutions is consistent – ease of installation, coupled with quality finishes across the range, ensures CoreLine is the clear choice for LED.

The installer touch-points are highlighted with green colors, which are consistent across the CoreLine range.

The product label is recognizable with a QR tag.

CoreLine Downlight

Up to
75%
energy savings

CFL EM

CoreLine Downlight

Wattage Mini	54 W	11 W
Wattage Compact	66 W	22 W
Lifetime	10,000 hrs	50,000 hrs

Savings over life*
1100 lm 2100 lm

€300,- €330,-

Benefits

- Substantial energy savings and longer lifetime reduce operational cost
- One-to-one replacement from conventional luminaires to LED luminaires
- Covers more professional applications due to DALI dimming and aluminum reflector

Application

General lighting in corridors /
Retail stores / Reception areas /
Indoor circulation areas

Presence Detector LRM1000

Benefits

- **Up to 30% additional energy savings**
- Increased lifespan of installation - turns off lighting when not required
- Detects subtle movement
- Surface mounted sensor installation

Presence Detector LRM1011

Benefits

- **Up to 30% additional energy savings**
- Small, unobtrusive sensor - detects subtle movement
- Increased lifespan of installation - turns off lighting when not required

Movement Detector LRM1032

Benefits

- **Up to 50% additional energy savings**
- Movement detector unit replaces traditional light switch
- Retrofit possible (use LRM1033)
- Increased lifespan of installation - turns off lighting when not required

Movement Detector LRM1040

Benefits

- **Up to 70% additional energy savings**
- Daylight override sensor prevents switch on if enough daylight is available
- Up to 20 years usage
- Increased lifespan of installation - turns off lighting when not required
- Wall and ceiling mounting possibility
- IP54

5 📄 The online tool automatically calculates the TCO

Many clients renew their lighting installation for the great energy savings LED offers. But there's more: LEDs have a much longer lifetime and lower maintenance costs. All of these factors together determine the Total Cost of Ownership (TCO) - a very useful selling point that shows the long-term savings LED brings. With these five simple steps, you can instantly show your clients their TCO savings!

“ Excellent performance in challenging conditions.”

VEGATECH.nl B.V. is a technical-services company in the Netherlands that designs and implements tailor-made installations. When Heeren Fruit & Vegetables asked to take on the lighting infrastructure for its new premises, VEGATECH.nl B.V. was faced with a challenge, they knew exactly how to handle.

Marijn Verbruggen, owner of Vegatech B.V.:
“An industrial company like Heeren Fruit & Vegetables has very specific demands for its lighting equipment. The production takes place in cold spaces and high cleanliness standards are the norm. Looking into Philips LED lighting, the CoreLine Waterproof performs excellently in cold environments. It’s robust design can withstand the challenging conditions

and reduces the risk of contamination to operations. Also, hygiene is extremely important, which is solved with the IP65 (dust and moisture) and IK08 (impact) rating. Marijn Verbruggen: “The long lifetime of LED reduces the maintenance, which means less disruption to the operations. The energy savings of up to 50% are great for the business of my customer.”

Application bundles

With the introduction of LED technology, lighting has entered the 21st century. Compared to conventional products, LED lamps and luminaires offer much lower energy consumption and a much longer lifetime. Also, as a digital light source, LED luminaires offer many new possibilities in terms of intelligent lighting.

Getting the combination right

To help installers make the most of the technical and commercial potential of LED, Philips has created special virtual packages called 'Application bundles'. These bundles are based on real-life applications that will benefit from having the right combination of LED luminaires, or of luminaires and controls. As most elements are part of the popular CoreLine range, compatibility is guaranteed, and installation is hassle-free.

* Instead of the GreenSpace Accent Fresh Food Meat, you can also use a track-mounted option: the EcoStyle Fresh Food Meat projector - EOC order code: 85340500 (white) or 85339900 (black). This alternative also enhances the redness in the meat display. Lighting design will differ slightly if alternative products are used.

** Instead of the EcoStyle Champagne, you can also use a recessed accent option: the GreenSpace Accent Champagne - EOC order code: 26322800 (white). This alternative also enhances the colors and textures of the different breads on display. Lighting design will differ slightly if alternative products are used.

“A safe and sustainable place.”

The Sparkasse Am Brill savings bank in Bremen, Germany is a dynamic hub of banking activities, with many visitors coming and going every day. The bank decided to equip its parking facilities with all-new lights - with two important objectives: energy savings and creating a safe, pleasant environment. An interview with bank manager **Mr Bolte**.

Case study

37%

Energy saving versus their old conventional lighting

Why did the car park need new lighting?

“Automotive transport is one of the engines that powers the economy. We understand that to do business, people need to travel to different places. They need to be able to park their car in a convenient and safe way. And for all our clients and relations, our office is one of the places they go to. So for us, it was all about how the car park fits into the bank’s overall presence.”

What prompted you to make the switch to energy-efficient lighting?

“We are a savings bank. We are in the business of spending and investing our clients’ money in the most responsible way. Switching to low-energy lights was a way to cut costs, but also to move towards a more sustainable mode of operation.”

So it was about more than saving money?

“Most definitely. It’s also about how we do business. Sparkasse am Brill provides complex financial services, so transparency is important.

We want to be an open, accessible and secure partner for its clients. And we realized that our car park needed to meet those same requirements. It is, after all, one of the gateways into the bank.”

How did you balance these two objectives?

“We did not want the move to energy-efficient lighting to diminish the quality of the parking experience. Philips understood that what the bank needed was an upgrade to luminaires that would minimize maintenance costs, be extremely reliable (even under humid conditions), and offer excellent value for money. They managed to do all that and also improve the lighting quality. That made the investment extra worthwhile.”

Why did you choose the Philips CoreLine LED Waterproof range?

“It’s just good business sense. These products offered us the energy savings we needed at a very affordable price. And the lights in the car park are on 24/7, so the low

energy consumption quickly added up to major cost savings. And with motion detectors, we can even dim the lights whenever the car park is not being used. It was our goal to uphold the level of lighting we had. The new luminaires have delivered that, and more: they provide a beautifully natural, white light.”

What difference has it made?

“In many ways, the car park feels brand new! The lighting now truly fills up the space, making it more open and agreeable. So the initial impetus for this operation was to cut costs, but we have also seen that light can truly redefine the character of an environment. It’s a win-win situation, which is something every banker likes!”

“Up to 70% additional energy savings when combined with CoreLine Controls.”

“My space, my solution.”

AllTapeSupplies’ management team has more than 25 years experience in the international self-adhesive tape business. When the time came to decide for the lighting equipment of their new office in Tilburg, the Netherlands, they looked for a solution that reflected the same value that the company brings to its clients: quality performance.

CEO Felipe Muñoz has a clear view on the role that lighting should play in his organization. “With the switch to Philips LED we have reduced maintenance and therefore we achieved far less disruption in our business operations. Our office is a very comfortable and productive working environment due to the guaranteed flicker free light and the integrated new optics, which meet the office lighting norms.” Muñoz decided to take his own philosophy to heart. “We wanted our own people to benefit from the new lighting, just as we want our customers to benefit from our products.” The lighting saves up to 40% versus the traditional office lighting. This helps us to meet our sustainability goals and underlines our company’s vision.
