The importance of details

Valena Life renews itself maintaining its sophisticated style and multiplying innovative solutions.

"The subtle curves of the switch and the delicacy of the lines give lightness to the product. Valena Life's identity lies, above all, in its details."

Florent Glenisson,
designer of the Valena Life / Allure
range, Legrand Group.

An iconic design

“The Valena Allure range represents a real innovation in design and form. Its curves and subtle roundness both seduce the user and endow the product with a lightness and modernity. It represents a true departure from the classic shapes.”

Florent Glenisson,
designer of the Valena Life / Allure
range, Legrand Group.

Step out of the ordinary

Valena Allure: innovative design can transform the home into an area of new experiences.

The light

An integrated, subtle and sophisticated light option under the switch allows users to easily locate it even in the dark and give the ambience a technological touch.

PROTECTED CONTACTS IP2X MECHANISM

No finger contacts with live parts during installation

BIGGER RELEASE BUTTONS

More comfort for your fingers

METAL SUPPORT FRAME COVERED BY PLASTIC LAYER

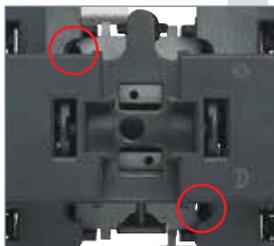

Protection against electrical shock and injuries

SHUTTER FOR CHILD PROTECTION

Embedded in the mechanism

TEST POINTS

Free access without removing the device from the box

Detail from one-way switch

Double teeth claw system

- 1 - More effective grip and better tear resistance
- 2 - Completely protected claws at the neutral position, to avoid damage to the wires and injuries of the hand during installation
- 3 - Fast and automatic return to the neutral position

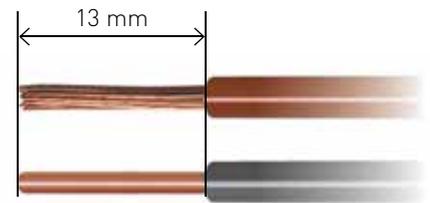

IN'MATIC : better performance and maximum quality for sockets and controls

Automatic terminals with coloured cable entry

- Fast and toolless:** just a few seconds needed to wire the device.
- Reliable:** longlasting connections guaranteed.
- Taping off:** faster and easier than with a screw terminal.

Suitable for both rigid and flexible cable

Protection cover

Protection of the device against dust, paint and scratches, even after installation. No need to remove the protection when the product is used before the cover plate installation.

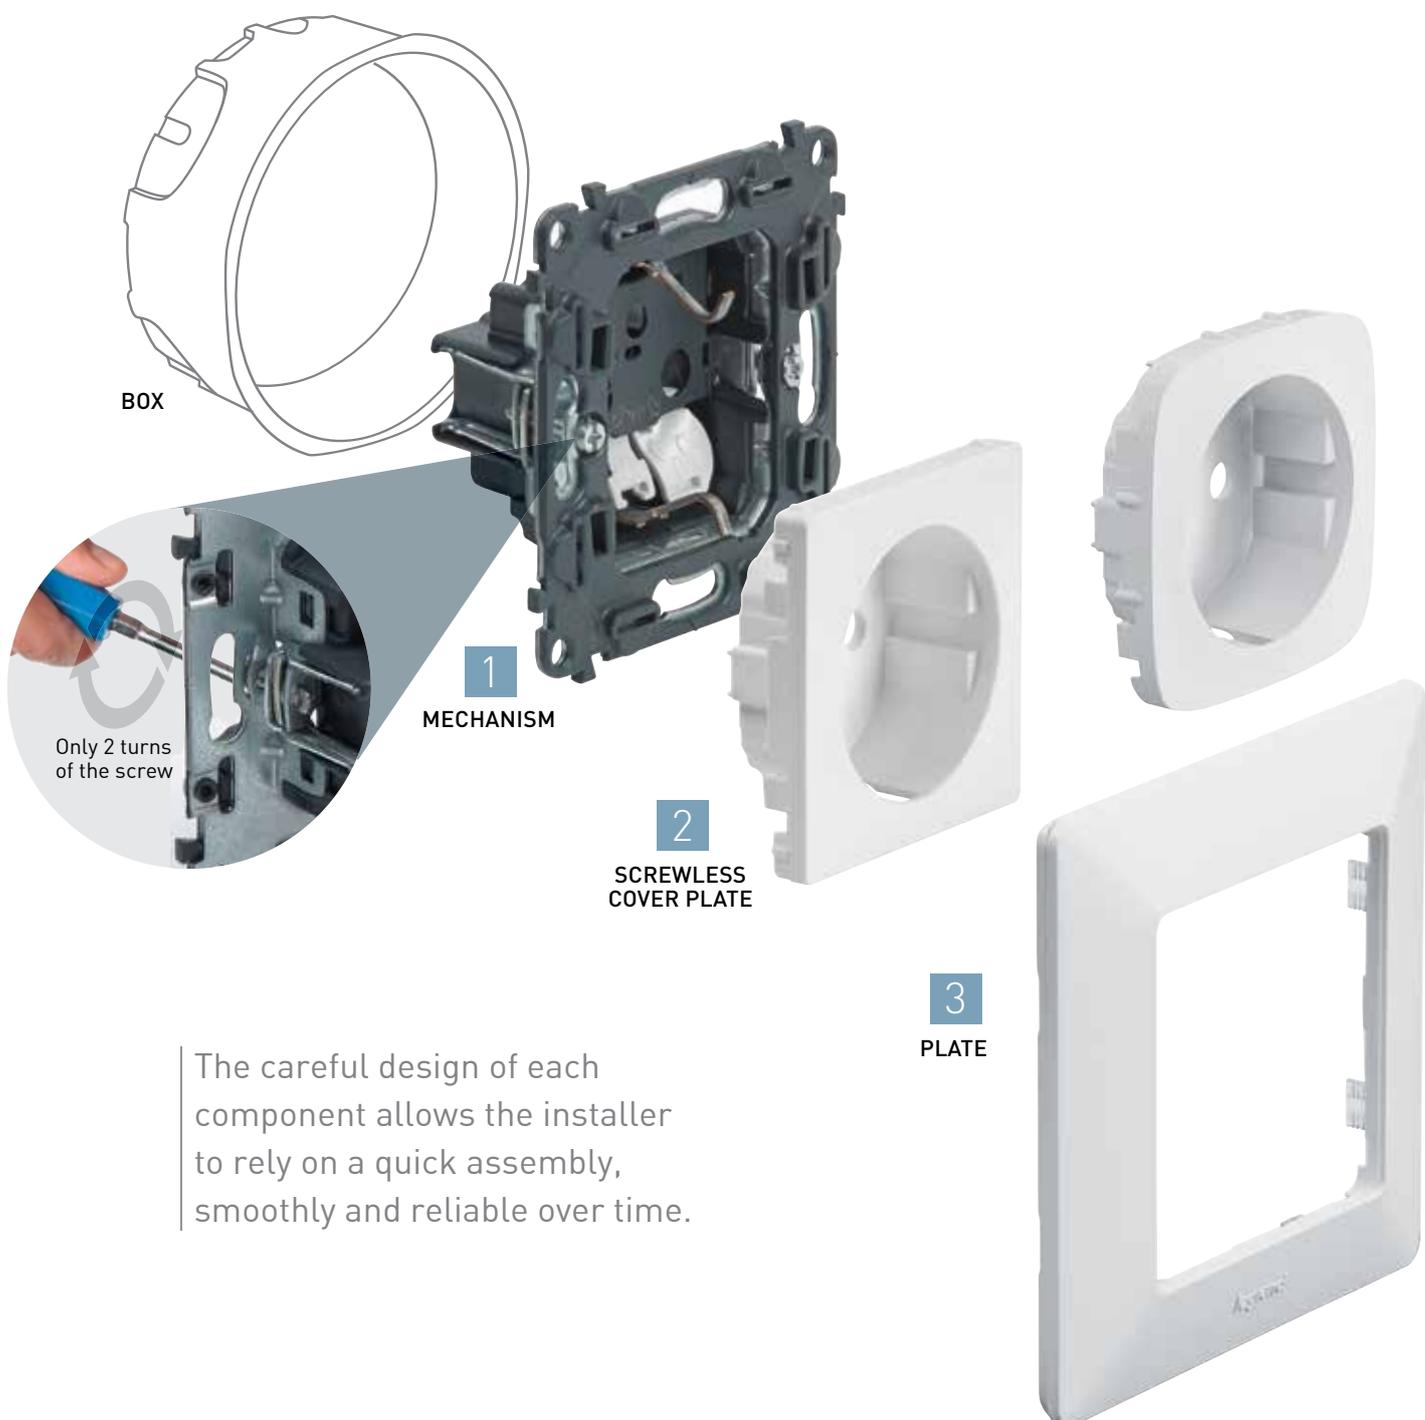

LED Plug-in

Illuminated functions with LED technology: energy saving, longlasting solution.

Valena IN'MATIC

Simple and Faster

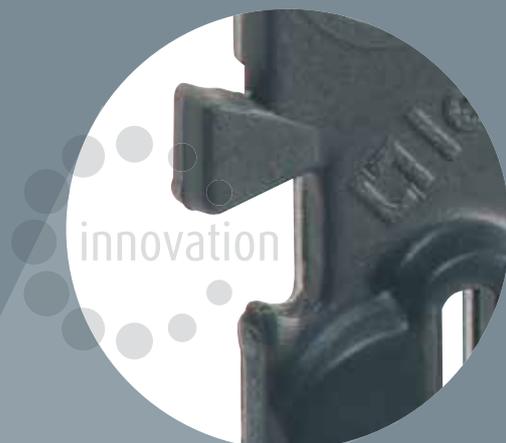

The careful design of each component allows the installer to rely on a quick assembly, smoothly and reliably over time.

INSTALLATION PROCEDURE

- 1 Fix the device into the box
- 2 Clip the screwless cover plate into the mechanism (screwdriver not needed)
- 3 Complete the work by clipping the plate. The screwless cover plate guides you in this process

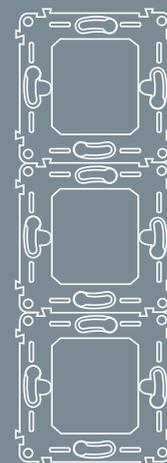

Innovative docking system for multi-gang installation

Visual quality of the final seal: perfect alignment of all the products.

Thanks to an innovative docking system, the support frames can be perfectly and easily joined for multi-gang installation.

The new system guarantees the stability and solidity of the devices during assembly: installation of the plastic cover of the mechanism and the cover plate.

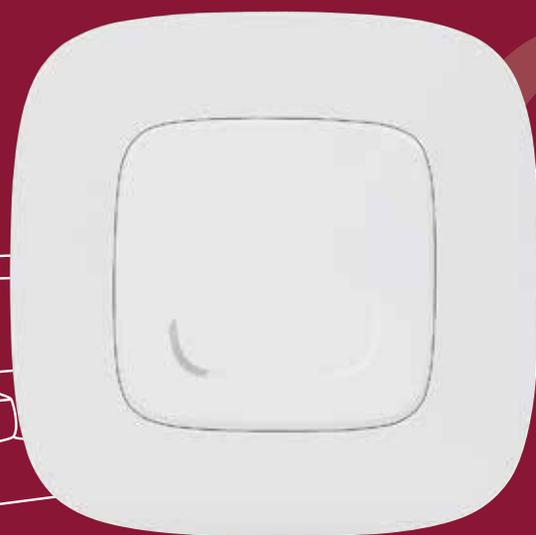

Perfect for installations in both horizontal and vertical orientation.

Radio controls

Light and shutter
radio controls
for simple and
flexible electric
wiring

Thanks to the radio transmission and the battery powering of controls, the devices easily integrate with the infrastructure of the traditional electric system, without the need for any additional wiring.

The use of radio technology (mesh network) for the communication of devices makes it possible to use the solutions in large spaces with obstacles and partition walls.

WIRELESS
CONTROL

Application for mobile devices.

Turn the house into a connected home.

THE RANGE IS SPLIT INTO:

- devices to control the load, integrated in the electric system;
- battery operated control devices, installable everywhere in full freedom;
- a radio/wi-fi gateway to let people easily connect to the installation inside and outside the home.

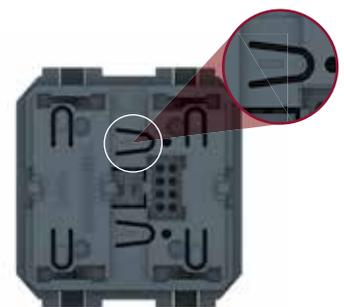

RADIO TECHNOLOGY

Thanks to the radio technology 2,4GHz, 16 channel, self-healing mesh network the devices in the system do not interfere with wireless devices in the house such as burglar system, computer, network, Wi-Fi data, etc.

SIMPLE AND QUICK SYSTEM CONFIGURATION

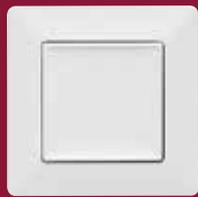

The system configuration does not require tools or software. To include and associate all the devices of the radio network, a simple pressure of the appropriate push-button on the front of each device itself is enough.

Radio Controls: Application examples

Addition
of a second light
control point

The traditional switch connected to the lamp is replaced by a radio switch without neutral. The radio switch is managed using an ON/OFF radio wireless control installed near the bed.

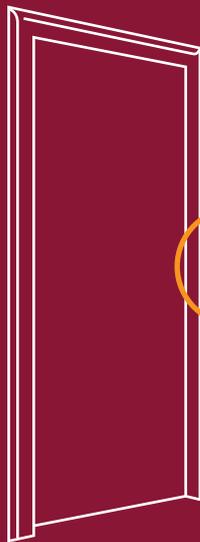

TRADITIONAL
SWITCH

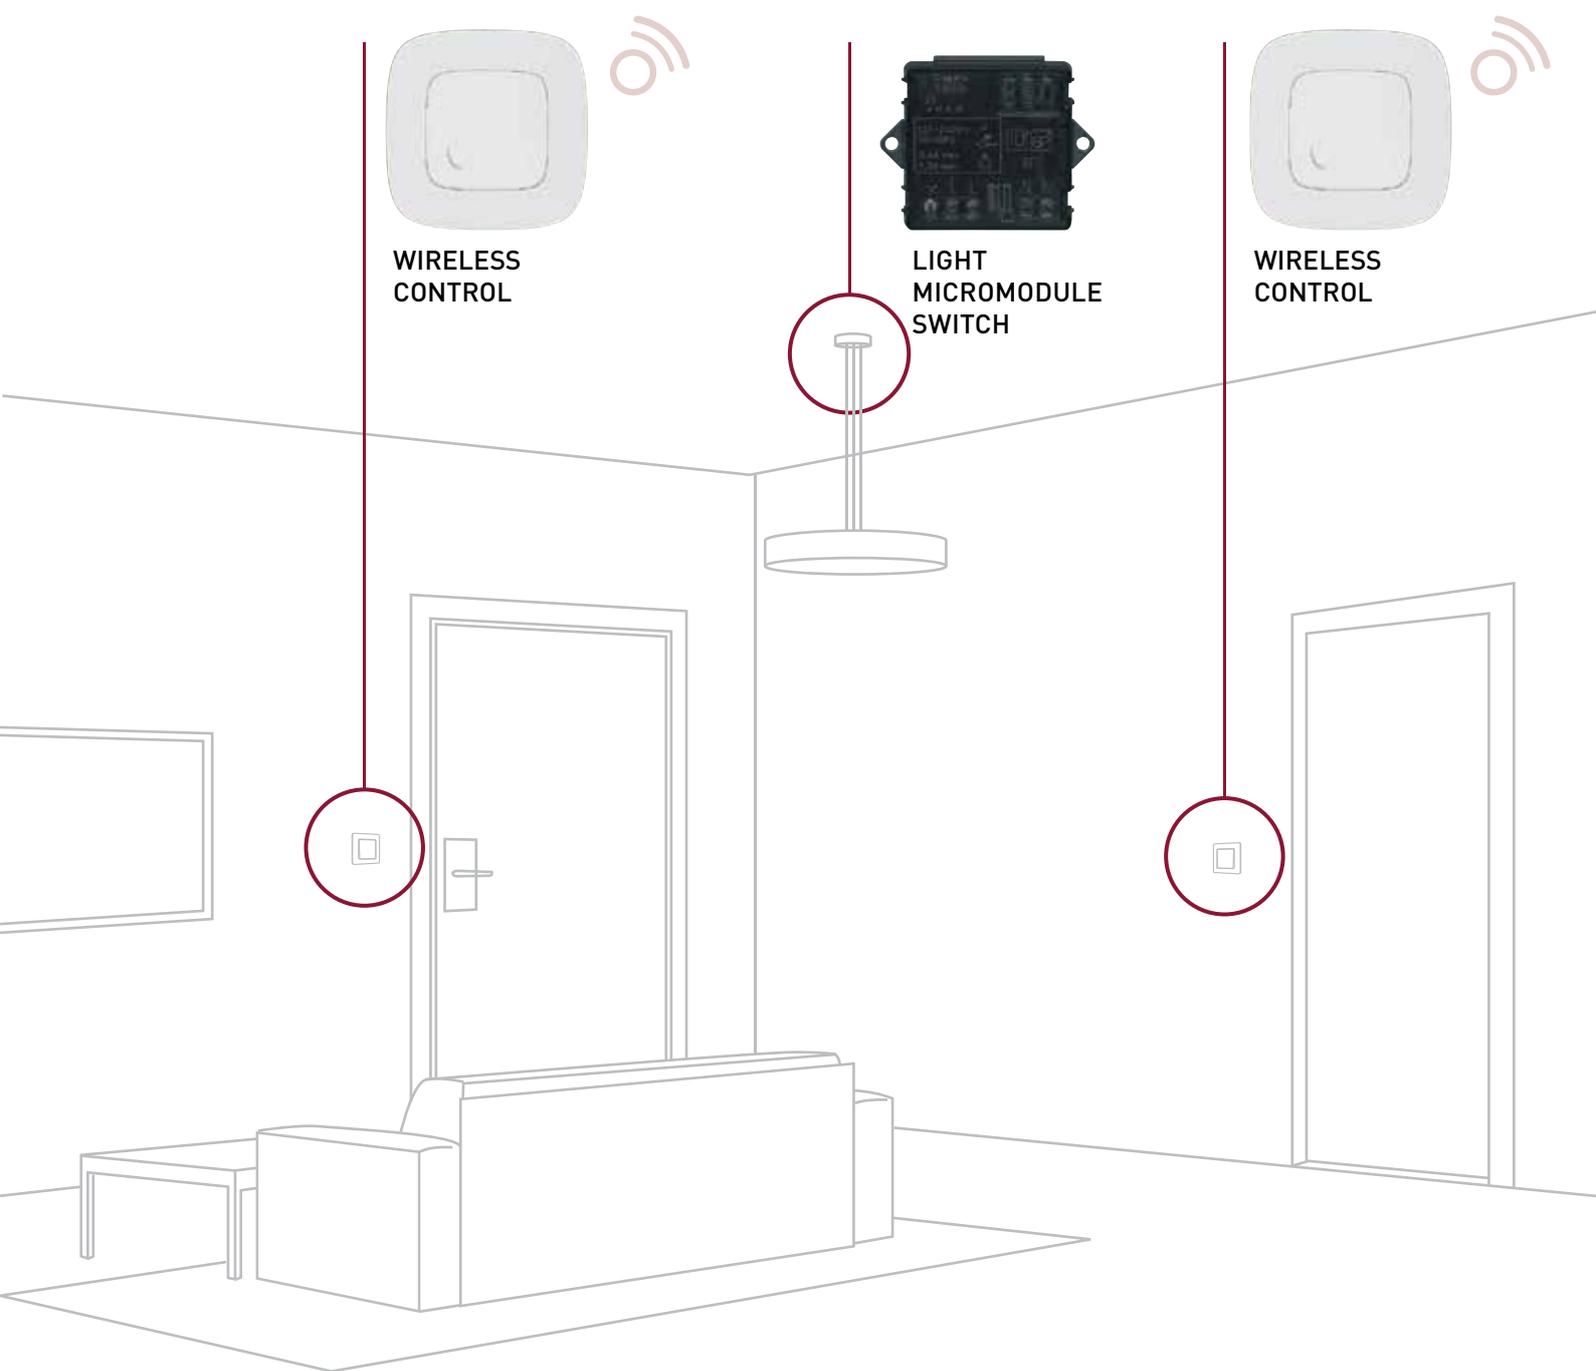

RADIO SWITCH
WITHOUT
NEUTRAL

WIRELESS
CONTROL

Creation of a two-way switch

The lighting system can also be made without flush mounted actuators. This is made possible by the use of a special small micromodule switch, which may be easily installed inside the light fitting cup. The switch is managed using wireless radio control installed anywhere inside the room, depending on the user's needs.

Valena™

MyHOME® automation

Thanks to a wide range of devices, MyHOME offers simple and efficient solutions to meet the safety, comfort, energy and communication needs of any private home and service sector establishment. Thanks to intelligent and programmable electronic devices, MyHOME makes it possible to access, in a simple and customised way, advanced functions that would

be difficult in a traditional electric system. In addition, its installation modularity and the functional integration of the various devices offer freedom to decide which applications to install immediately, and which in the future, without the need for important structural updates, and with highly effective cost management. MyHOME can also be integrated with other systems, such as KNX and DALI. Using the appropriate interface, and the TCP/ IP protocol, MyHOME is capable of managing and supervising the home also remotely, using a fixed telephone line, a mobile phone, or an internet connection.

MyHOME_SCREEN10

Thanks to the 10" 16/9 touch screen, users can manage and control the electric system, the multimedia functions (photos, audio, video), and the Internet connection.

Pack	Cat.Nos	Radio transmitter/receiver multifunction switches
		Switches for controlling 1 or 2 circuits connected to its terminals according to 3 different operating modes: time-lag switch, switch, remote control switch. Its receiver function is used to execute, on its circuits, ON/OFF commands received from individual control units, centralised control units, scenario switches, mobile control units, etc. Phase/neutral power supply
1	0 883 39	Weatherproof multifunction switch. 1 circuit 2500 W or 1 NO/NC contact outputs
1	5 738 60	Weatherproof multifunction 2-gang switch. 2 circuits 2500 W or 2 NO/NC contact outputs
		Indoor motion sensor
1	0 883 09	To switch on the lights connected to radio receivers remotely when there are movements, for an adjustable time Range detection: 2 to 10 m, timing: 1 to 30 min, light level: 1 to 1000 lux
		Indoor temperature sensor
1	0 883 30	IP 21. For indoor use only - surface mounting. Setting: 2 temperature thresholds. Temperature ranges: from - 10°C to + 40°C. Can be used to initiate 2 scenarios when the temperature is higher than the high threshold or lower than the low threshold
		Transmitter with auxiliary inputs
		For light control Can be used to initiate ON/OFF on closing or opening of a volt-free contact. For controlling a radio installation using commercially-available detectors (eg: light-sensitive switch, moisture sensor). Fits behind a traditional switch, without damage to the walls, to control a radio switch
1	0 883 31	
		For scenario control Can be used to launch 2 scenarios when closing and opening with a volt-free contact. For controlling scenario radio installation using commercially available detectors (moisture sensor, wind/sun sensors or smoke detectors)
1	0 883 32	
		WiFi/Radio gateway
1	0 883 10	To control a radio installation in or outside the home from a smartphone or a tablet. Perfect for switching off a light from your office when you forgot it, to simulate that you are at home. iOS and Android apps available
		Open Web Net/ZigBee Gateway Radio interface
1	0 883 28	Open/ZigBee interface for centralised control of functions through devices which use the Open Web Net communication protocol

ADVANTAGES FOR WHOLESALE AND RETAILERS

- products are individually protected and can be hanged on or placed in bulk
- the product is always visible for a faster identification

ADVANTAGES FOR THE INSTALLERS

- the product is protected throughout the delivery process, until the installation
- all useful information is printed on the flow pack
- additional information by scanning the QR code

Pack	Cat.Nos	Multi-application DIN controllers
1	F401	Controller with 2 relays for controlling a motor Max. motor power: 500 W 230 VAC Logical relay interlock 2 DIN modules
1	F411/1N	NO contact - For lighting (residential), shutters and motors 2 DIN modules 17.5 mm 1 output 16 A
1	F411/2	 2 outputs 10 A
1	F411/4	 4 outputs 6 A - common phase
1	F411/1NC	 Controller with 1 NO/NC relay For lighting: 16 A resistive, 10 A incandescent lamps, 4 A cos φ 0.5 for ferromagnetic transformers and 4 A for fluorescent lamps with 2 DIN modules
DIN controllers for dimming For use in conjunction with loads and control mechanisms (p. 78) for dimming control		
1	F414	For incandescent, halogen and ferromagnetic loads Load: 60 - 1000 W/230 VA - 50 Hz 4 DIN modules 17.5 mm
1	F415	For electronic transformers loads 1 output Load: 0.25 to 1.7 A/230 VA - 50 Hz 4 DIN modules 17.5 mm
1	F418	For dimmable LEDs, compact fluorescent lamps (CFL), energy saving halogen lamps and electronic transformers 1 output - 300 VA maximum 230 V~ - 150 VA maximum 127 V= 4 DIN modules 17.5 mm
1	F413N	For 1-10 V ballasts Load: 460 VA maximum 2 DIN modules 17.5 mm

Pack	Cat.Nos	Contact interfaces
1	F428	Allow connection between traditional wiring devices such as switches, time delay switches or external sensors 2 independent contacts 2 DIN modules 17.5 mm
1	3477	 To be installed in flush-mounting box
Additional DIN devices 2 DIN modules 17.5 mm		
1	F425	Memory module for actuators Restore the last state of an actuator in the event of a power failure
1	F420	Scenario module Allows creation of scenarios by linking different functions Up to 16 scenarios
1	F422	SCS-SCS gateway (extension) Allows extension of the installation or integration of different functions Suitable for larger installations
Basic module controllers For lighting: 2 A resistive or incandescent lamps and 2 A cos φ 0.5 for ferromagnetic transformers Physical or virtual configuration		
1	3475	Controller with 1 relay Suitable for installation in luminaire fixing covers or in flush-mounting boxes behind the control devices
1	3476	Controller/control unit with 1 relay with an input for conventional push-button with NO contact

Valena™ Life/Allure - MyHOME BUS

lighting control and automation BUS/SCS

■ System principle

The Lighting Control system allows the management of different functions in a simultaneous and integrated way. All the components of the Lighting Control system are interconnected via an electronic circuit that can be programmed: the BUS. The information is exchanged through the 2-wire BUS cable at low voltage (27 V_{DC}).

There are two types of devices in the system:

- the control units, which are connected only to the BUS cable and
- the actuators, both connected to the BUS cable and to the 230 VA power line for managing the connected load.

When the Lighting Control system devices are configured properly, it is possible to manage the load as follows:

- control for a single load
- control for one or more load groups;
- simultaneous management of all loads

It is also possible to carry out special functions which are difficult to achieve with conventional electrical systems.

These functions are called scenarios.

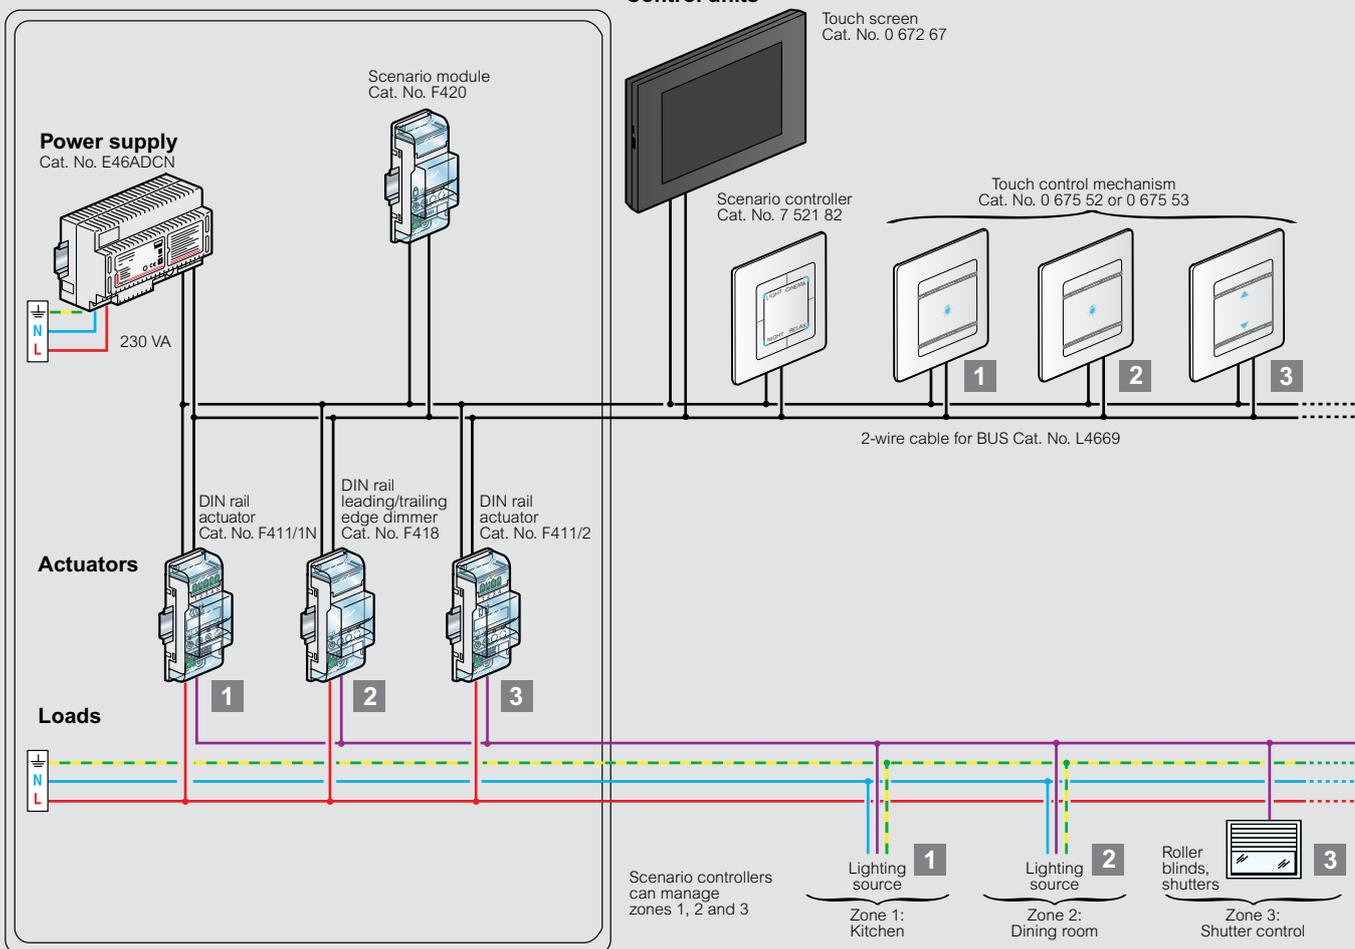

One scenario is a set of simultaneous controls of multiple groups of loads, used in order to modify the environment according to the user's needs.

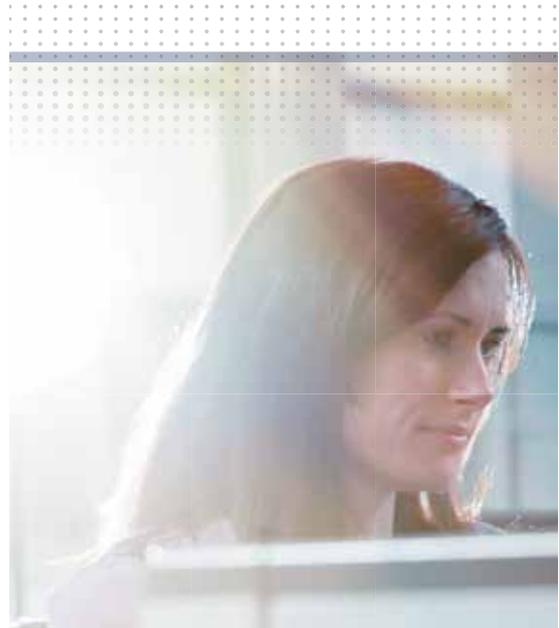

An example of a scenario can be represented by the simultaneous activation of lights, which can be performed by the user after entering the building, by using a single control device or by using the Touch Screen menu.
